(54) Title: A METHOD OF PROCESSING FILLETS, SUCH AS SALMON FILLETS, AND A SYSTEM FOR PERFORMING
THE METHOD

(57) Abstract: In a method and an apparatus for processing and packaging fillets, such as salmon fillets, the fillets are fed on to a conveyor belt (15), where they are cut into individual fillet slices by a slicer (2) and are analyzed immediately thereafter in a camera (9), where characteristic parameters of the fillet slices are determined, and the results are fed to a calculation unit, the fillet slices are moved further on by the conveyor belt to transport tables (8) positioned along the conveyor belt and having arranged thereon package trays (7) to which the fillet slices are transferred. Each transport table has a weighing cell (10) which currently weighs the weight of each individual package tray with placed fillet slices, and the weight is transferred to the calculation unit, which may determine on the basis of this which type of fillet slice is to be transferred the next time to a given package tray.
